Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show a sliding block connection between the object and the rod(11) as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. As this objection has not been addressed by the applicant the rejections of any claims dealing with the sliding block will be made as best understood by the examiner as no figure has been provided. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance. A response without the required drawings will be held as being noncompliant.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Farrell.

Regarding claims 7,8 and 12 Farrell US 5,246,329 discloses a device for hauling disabled vehicles comprising:

a loading ramp(40) pivotally connected to a vehicle (10);

a loading platform (60) slidable along said ramp between a fully loaded position where said platform overlies said ramp and a fully extended position where said platform is substantially rearward of said ramp;

wherein said platform employs a cylinder (110) which enables the platform to move over a distance substantially twice that of the cylinder ram's length;

at least first and second cable elements (122,126) adapted to move the platform in a first and a second direction relative to the cylinder extending and retracting respectively.

Regarding claim 9 Farrell also discloses that one or more pulleys are attached to said cylinder and adapted to move said cables.

Regarding claim 10 Farrell also discloses that the shaft holding the pulleys is pivotally mounted to frame members (70) which is slidably connected to said platform.

Art Unit: 3652

Regarding claim 11 Farrell also discloses that the cylinder is mounted to said ramp which is supported by the vehicle chassis, therefore the cylinder is also supported by said chassis.

Regarding claims 13-15 Farrell further discloses that the device uses two sliding blocks (66) each mounted on a respective side of the loading ramp and connected to said platform via a pivotal connection (68).

Response to Amendment

The amendments to the specification, drawings and claims have been entered into the record. The drawings which were submitted are accepted, but other drawings which were previously required were not sent at this time. The application was examined without these drawings as best understood by the examiner to further prosecution.

Response to Arguments

Applicant's arguments filed May 12, 2006 have been fully considered but they are not persuasive. The Farrell reference while not explicitly stating the platform move twice the stroke of the cylinder it does show this in the drawings. As such this is an inherent feature in the device.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3652

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
